

The analysis on this map shows a dynamic 10-minute walk service area (1/2 mile distance) to parks. The service areas use the street network to determine walkable distance. This analysis takes into consideration barriers such as highways, freeways, interstates, rivers, and railroads that would need a bridge or underpass in the street network to create access across these barriers.

The Level of Park Need result combines and weights the following demographic profiles: 50% = population density (people per acre); 25% = density of individuals in households with income less than \$25,000; and 25% = density of kids age 19 and younger. Demographics are 2016 Forecast Census block group data provided by Esri.

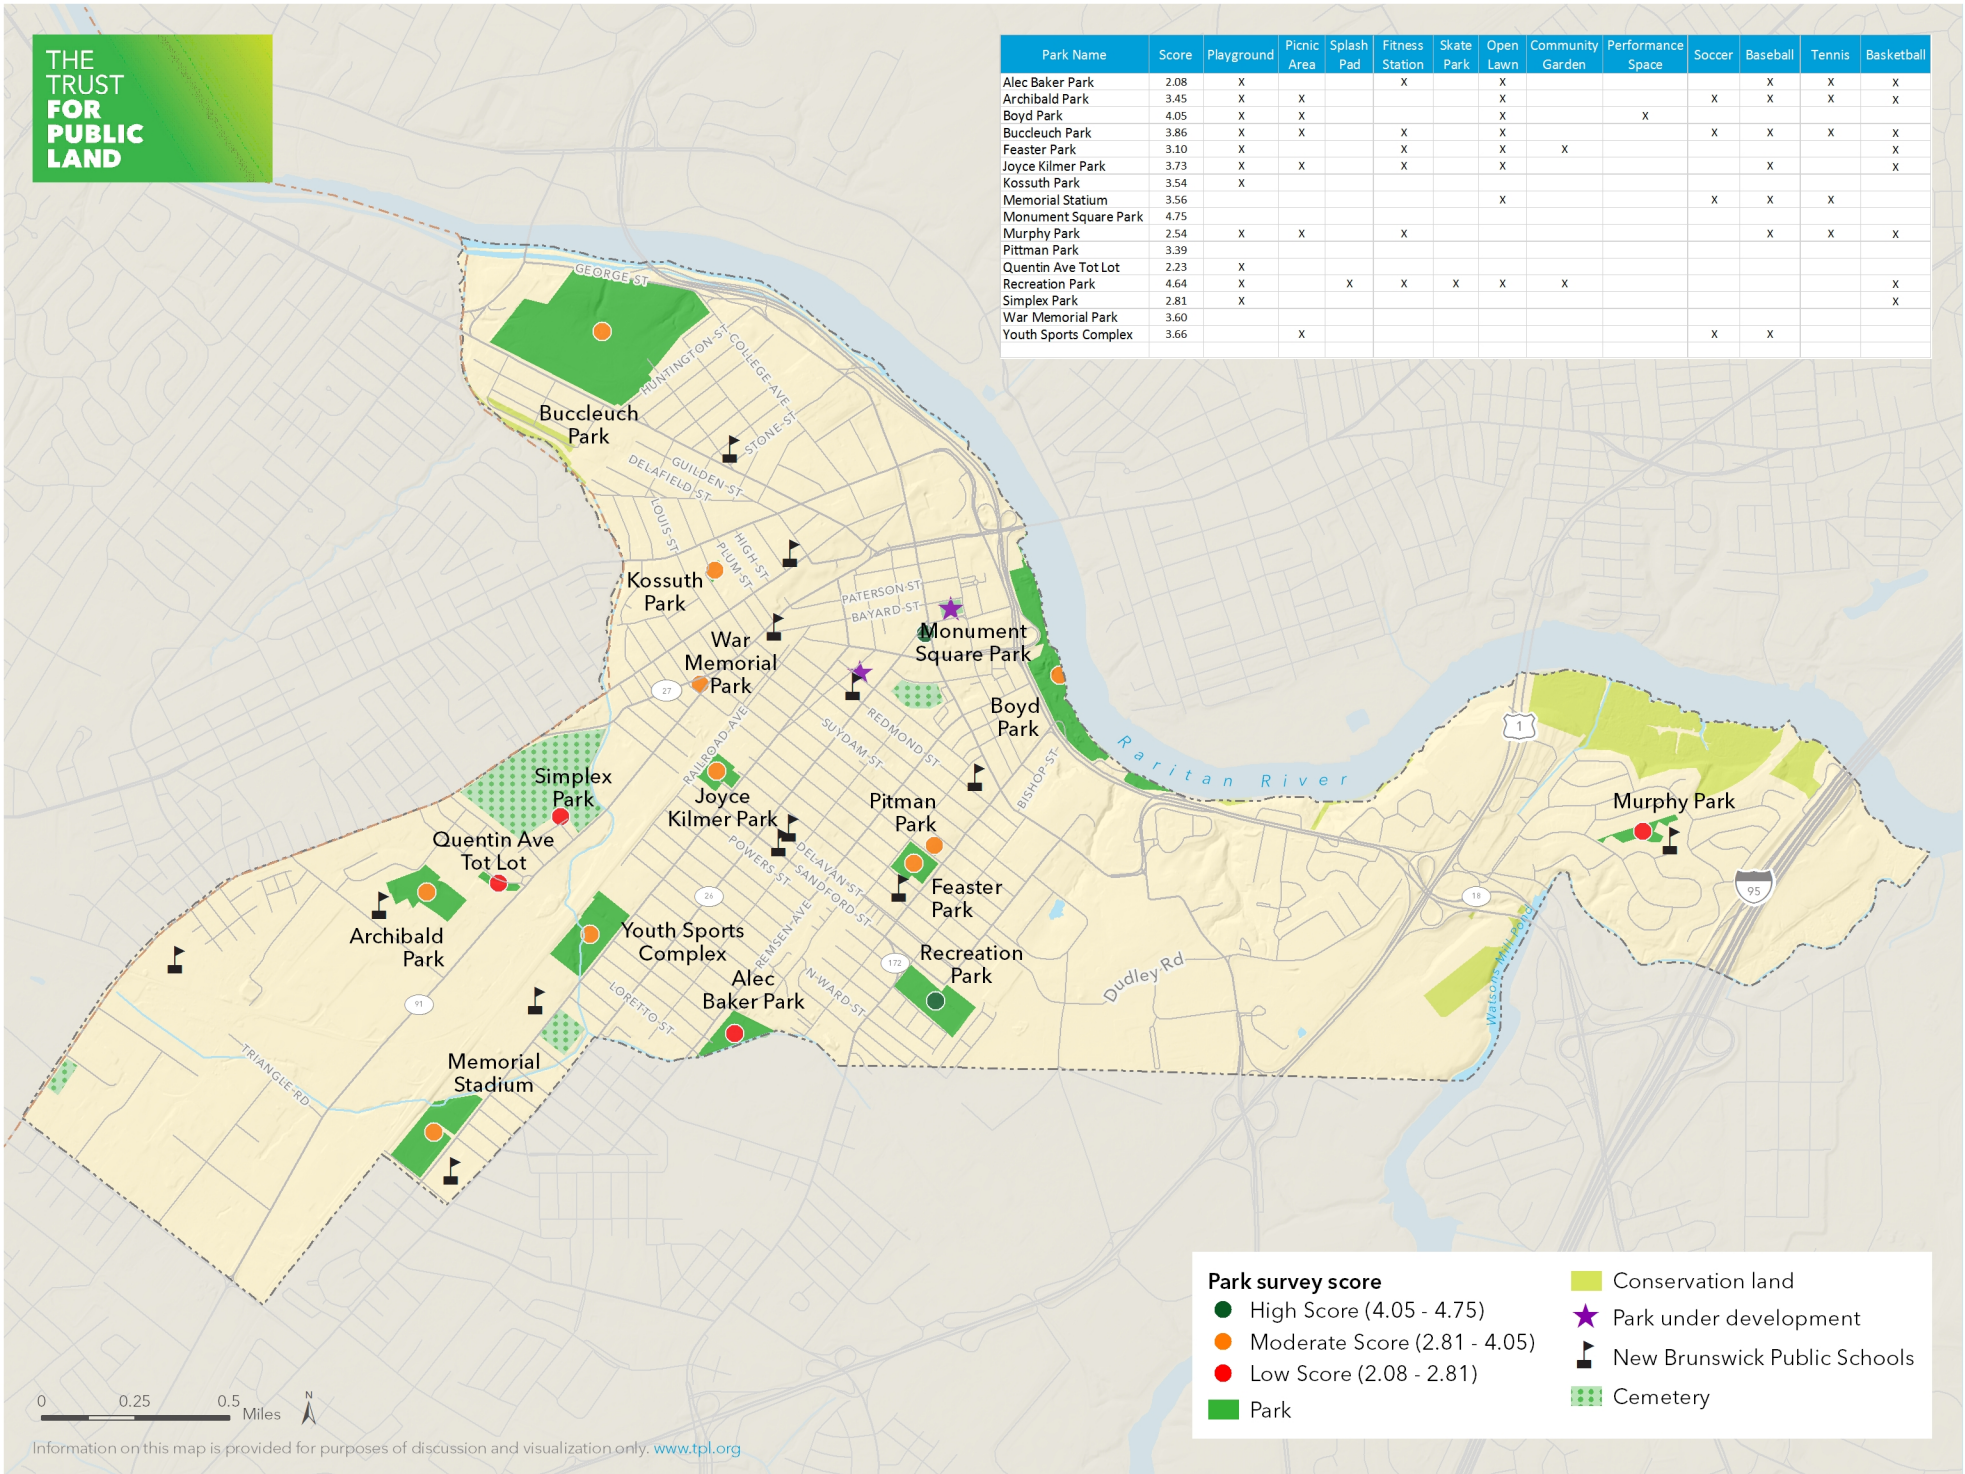

Level of Park Need	Park	New Brunswick Public Schools
Very High	10-minute walk service area	Cemetery
High	Conservation land	College/University
Moderate	Park under development	Vacant zero population areas

0 0.25 0.5 Miles
